LG REFRIGERATOR LIMITED WARRANTY - U.S.A.

Should your LG Refrigerator ("Product") fail due to a defect in materials or workmanship under normal home use, during the warranty period set forth below, LG will at its option repair or replace the product. This limited warranty is valid only to the original retail purchaser of the product and applies only when purchased and used within the United States including U.S. Territories. Proof of original retail purchase is required to obtain warranty service under this limited warranty.

WARRANTY PERIOD

<table>

Noises associated with normal operation and failure to follow instructions found in the use and care and installation guides or operating the unit in an unsuitable environment will not be covered under this warranty.

- Replacement products and parts are warranted for the remaining portion of the original warranty period or ninety (90) days, whichever is greater.
- Replacement products and parts may be new or remanufactured.

THIS WARRANTY IS IN LIEU OF ANY OTHER WARRANTY, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. TO THE EXTENT ANY IMPLIED WARRANTY IS REQUIRED BY LAW, IT IS LIMITED IN DURATION TO THE EXPRESS WARRANTY PERIOD ABOVE. NEITHER THE MANUFACTURER NOR ITS U.S. DISTRIBUTOR SHALL BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL, INDIRECT, SPECIAL, OR PUNITIVE DAMAGES OF ANY NATURE, INCLUDING WITHOUT LIMITATION, LOST REVENUES OR PROFITS, SPECIAL, OR PUNITIVE DAMAGES OF ANY NATURE, INCLUDING WITHOUT LIMITATION, LOST REVENUES OR PROFITS, OR ANY OTHER DAMAGE WHETHER BASED IN CONTRACT, TORT, OR OTHERWISE. Some states do not allow the exclusion or limitation of incidental or consequential damages or limitations on how long an implied warranty lasts, so the above exclusion or limitation may not apply to you. This warranty gives you specific legal rights and you may also have other rights that vary from state to state.

THIS LIMITED WARRANTY DOES NOT COVER:

1. Service trips to deliver, pick up, install, or repair the product; instruct the customer on operation of the product; repair or replace fuses or correct wiring or plumbing, or correction of unauthorized repairs/ installation.
2. Failure of product to perform during power failures and interruptions or inadequate electrical service.
3. Damage caused by leaky or broken water pipes, frozen water pipes, restricted drain lines, inadequate or interrupted water supply or inadequate supply of air.
4. Damage resulting from operating the product in a corrosive atmosphere or contrary to the instructions outlined in the product owner’s manual.
5. Damage to the product caused by accidents, pests and vermin, lightning, wind, fire, floods, or acts of God.
6. Damage resulting from misuse, abuse, improper installation, repair, or maintenance. Improper repair includes use of parts not approved or specified by LG.
7. Damage or failure caused by unauthorized modification or alteration, or if it is used for other than the intended purpose, or any water leakage where the unit was not properly installed.
8. Damage or failure caused by incorrect electrical current, voltage, or plumbing codes, commercial or industrial use, or use of accessories, components, or consumable cleaning products that are not approved by LG.
9. Damage caused by transportation and handling including scratches, dents, chips, and/or other damage to the finish of your product, unless such damage results from defects in materials or workmanship and is reported to the finish of your product, unless such damage results from defects in materials or workmanship and is reported within one (1) week of delivery (Call: 1-800-243-0000).
10. Damage or missing items to any display, open box, discounted, or refurbished product.
11. Products with original serial numbers that have been removed, altered, or can not be readily determined. Model and Serial numbers, along with original retail sales receipt, are required for warranty validation.
12. Increases in utility costs and additional utility expenses.
13. Replacement of light bulbs, filters, or any consumable parts.
14. Repairs when your product is used in other than normal and usual household use (e.g. commercial use, offices, and recreational facilities) or contrary to the instructions outlined in the product owner’s manual.
15. Costs associated with removal of your product from your home for repairs.
16. The removal and reinstallation of the product if it is installed in an inaccessible location or is not installed in accordance with published installation instructions, including LG’s owner’s and installation manuals.
17. Shelves, door bins, drawers, handles, accessories, and other parts besides those that were originally included with this particular model.

The cost of repair or replacement under these excluded circumstances shall be borne by the consumer.

For complete warranty details and customer assistance, please call or visit our website:
Call 1-800-243-0000 (24 hours a day, 365 days a year) and select the appropriate option from the menu, or visit our website at www.lg.com

LG REFRIGERATOR LIMITED WARRANTY - Canada

WARRANTY: Should your LG Refrigerator ("Product") fail due to a defect in material or workmanship under normal home use during the warranty period set forth below, LG Canada will at its option repair or replace the Product upon receipt of proof of original retail purchase. This warranty is valid only to the original retail purchaser of the product and applies only to a Product distributed in Canada by LG Canada or an authorized Canadian distributor thereof. The warranty only applies to Products located and used within Canada.

WARRANTY PERIOD: (Note: If the original date of purchase cannot be verified, the warranty will begin sixty (60) days from the date of manufacture).

Noises associated with normal operation and failure to follow instructions found in the use and care and installation guides or operating the unit in an unsuitable environment will not be covered under this warranty.

- Replacement products and parts are warranted for the remaining portion of the original warranty period or ninety (90) days, whichever is greater.
- Replacement products and parts may be new or remanufactured.
- LG Authorized Service Centers warrant their repair work for thirty (30) days.
- LG CANADA’S SOLE LIABILITY IS LIMITED TO THE WARRANTY SET OUT ABOVE, EXCEPT AS EXPRESSLY PROVIDED ABOVE. LG CANADA MAKES NO AND HEREBY DISCLAIMS ALL OTHER WARRANTIES AND CONDITIONS RESPECTING THE PRODUCT, WHETHER EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY IMPLIED WARRANTY OR CONDITION OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE, AND NO REPRESENTATIONS SHALL BE BINDING ON LG CANADA. LG CANADA DOES NOT AUTHORIZE ANY PERSON TO CREATE OR ASSUME FOR IT ANY OTHER WARRANTY OBLIGATION OR LIABILITY IN CONNECTION WITH THE PRODUCT TO THE EXTENT THAT ANY WARRANTY OR CONDITION IS IMPLIED BY LAW, IT IS LIMITED TO THE EXPRESS WARRANTY PERIOD ABOVE. LG CANADA THE MANUFACTURER OR DISTRIBUTOR SHALL NOT BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL, SPECIAL, DIRECT OR INDIRECT DAMAGES, LOSS OF GOODWILL, LOST PROFITS, PUNITIVE OR EXEMPLARY DAMAGES OR ANY OTHER DAMAGE, WHETHER ARISING DIRECTLY OR INDIRECTLY FROM ANY CONTRACTUAL BREACH, FUNDAMENTAL OR OTHERWISE, OR FROM ANY ACTS OR OMISSIONS, TORT, OR OTHERWISE. This warranty gives you specific legal rights. You may have other rights which may vary from province to province depending on applicable provincial laws. Any term of this warranty that negates or varies any implied condition or warranty under provincial law is severable where it conflicts with provincial law without affecting the remainder of this warranty’s terms.

THIS LIMITED WARRANTY DOES NOT COVER:

1. Service trips to deliver, pick up, install, or repair the product, instruct the customer on operation of the product, repair or replace fuses or correct wiring or plumbing, or correction of unauthorized repairs/installation.
2. Failure of product to perform during power failures and interruptions or inadequate electrical service.
3. Damage caused by leaky or broken water pipes, frozen water pipes, restricted drain lines, inadequate or interrupted water supply or inadequate supply of air.
4. Damage resulting from operating the product in a corrosive atmosphere or contrary to the instructions outlined in the product owner’s manual.
5. Damage to the product caused by accidents, pests and vermin, lightning, wind, fire, floods, or acts of God.
6. Damage resulting from misuse, abuse, improper installation, repair, or maintenance. Improper repair includes use of parts not approved or specified by LG.
7. Damage or failure caused by unauthorized modification or alteration, or if it is used for other than the intended purpose, or any water leakage where the unit was not properly installed.
8. Damage or failure caused by incorrect electrical current, voltage, or plumbing codes, commercial or industrial use, or use of accessories, components, or consumable cleaning products that are not approved by LG.
9. Damage caused by transportation and handling, including scratches, dents, chips, and/or other damage to the finish of your product, unless such damage results from defects in materials or workmanship and is reported within one (1) week of delivery (Call 1-800-243-0000).
10. Damage or missing items to any display, open box, discounted, or refurbished product.
11. Products with original serial numbers that have been removed, altered, or can not be readily determined. Model and Serial numbers, along with original retail sales receipt, are required for warranty validation.
12. Increases in utility costs and additional utility expenses.
13. Replacement of light bulbs, filters, or any consumable parts.
14. Repairs when your product is used in other than normal and usual household use (e.g. commercial use, offices, and recreational facilities) or contrary to the instructions outlined in the product owner’s manual.
15. Costs associated with removal of your product from your home for repairs.
16. The removal and reinstallation of the product if it is installed in an inaccessible location or is not installed in accordance with published installation instructions, including LG’s owner’s and installation manuals.
17. Shelves, door bins, drawers, handles, accessories, and other parts besides those that were originally included with this particular model.

The cost of repair or replacement under these excluded circumstances shall be borne by the consumer.

For complete warranty details and customer assistance, please call or visit our website: Call 1-888-542-2623 (24 hours a day, 365 days a year) and select the appropriate option from the menu, or visit our website at www.lg.com

IMPORTANT SAFETY INSTRUCTIONS

SAFETY MESSAGES

This manual contains several important safety notices. Always read and obey all of the following safety messages.

This is the safety alert symbol. This symbol is a warning to potential dangers that could cause death, injury or damage to you, others or the product. All safety messages will follow after this warning symbol and the word “DANGER”, “CAUTION” or “WARNING”. These words mean:

- **DANGER**: You may be killed or suffer fatal damage if you do not follow instructions.
- **WARNING**: You may be killed or seriously injured if you do not follow instructions.
- **CAUTION**: Indicates a potentially hazardous situation which, if not avoided, may result in minor injury or damage to the product.

All safety messages inform you of potential danger, advise you on how to reduce the risk of injury and tell you what can occur if the instructions are not followed.

**WARNING**

To reduce the risk of fire, electrical shock or personal injury, the following precaution measures should be followed:

- **NEVER** disconnect the refrigerator by pulling the power cord, always grip the plug firmly and disconnect it directly from the outlet.

- Immediately repair or replace all faulty or damaged service cables. Do not use cords that have cracks or abrasion damage on the length of the cord or on the plug.

- When moving your refrigerator, take care not to roll over the electrical cord.

- **DO NOT** store, use on it or in proximity, explosive and/or flammable propellent substances such as; gasoline, aerosol cans or other combustible liquids or vapors in this or any other electrical appliance.

- **DO NOT** permit children to climb, stand or swing from the doors or shelves of the refrigerator. This can cause serious injury to them and damage to the product.

- Keep your fingers away from areas in which they can become caught, such as the doors, hinges and cabinets. Be careful closing the doors when children are near.

- Unplug the refrigerator before cleaning or repairing. **NOTE**: We strongly recommend that any repair services be performed by a qualified professional.

- Before replacing a burned-out light bulb, unplug the refrigerator or shut down the circuit breaker to avoid contact with a live wire (the bulb could break while being replaced). **NOTE**: Setting the control to the OFF position does not disconnect the power from the light bulb circuit.

- **DO NOT** keep bottles in the freezer compartment, they could explode after freezing and cause damage.

- **For your safety**, this product should be properly grounded. Have a qualified professional check the electrical circuit and outlet to ensure a proper ground connection.

- **Read all instructions before utilizing the product. Utilize this product only as explicitly expressed in this guide.**

- **Once the refrigerator is operating, avoid touching cold surfaces of the freezer with damp or wet hands; the skin could become adhered to these surfaces.**

- In refrigerators with an automatic ice dispenser, avoid contact with moving parts of the ejector mechanism or with the heating mechanism that discharges the cubes. **DO NOT** place your fingers or hands in the ice dispenser mechanism while the refrigerator is connected.

- **DO NOT** refreeze foods which have already thawed. The Department of Agriculture of the United States, in your Bulletin of Home and Gardens No. 69 establishes that: "...You can refreeze food that has thawed if they contain ice crystals or are cold and below 40 °F (4 °C)."

  "...Ground beef, perishable food or seafood that is discolored or has an unpleasant odor should not be frozen or consumed. Consumption of melted ice cream should also be avoided. If the odor or color of food is questionable, discard it. The food may be dangerous to consume".

  "Partial thawing or refreezing reduces the quality of the food, especially fruit, vegetables and prepared meals. The quality of red meat is less affected than other foods. Use refrozen products as soon as possible in order to maintain their quality".

SAVE THESE INSTRUCTIONS
This appliance is not intended for use by children, persons with physical or mental disabilities, persons with reduced sensory or mental capacity, or persons with lack of experience or know-how, unless they have supervision or instruction in relation to the use of the appliance by the person responsible for their safety. Children should be supervised to assure that they do not play with the appliance.

Children becoming trapped or suffocated is not a problem of the past. Discarded and abandoned refrigerators are a hazard, even if they remain there “for just a few days”. If you would like to dispose of your old refrigerator, please follow the instructions below to prevent any accidents.

BEFORE DISPOSING YOUR REFRIGERATOR OR FREEZER WHEN NO LONGER IN USE:
- Remove the doors.
- Leave the shelves in place so that children cannot easily become stuck in them.

CFC DISPOSAL

Your old refrigerator may have a cooling system that uses CFC’s (chlorofluorocarbons). CFC affects the stratospheric layer of the ozone.

If you decide to throw out your old refrigerator, ensure that CFC contaminants are properly disposed of by a qualified professional. If you intentionally remove the CFC refrigerant, you could be subject to fines or prison in accordance with environmental legislation in effect.

IMPORTANT: Attentively read the following.

TO CONNECT ELECTRICITY

**WARNING**

**ELECTRICAL SHOCK HAZARD**

FOR YOUR PERSONAL SAFETY, this appliance must be properly grounded. Have a qualified electrician check your wall outlet to ensure that the plug is grounded properly.

**RECOMMENDED GROUNDING METHOD**

Your refrigerator must always be plugged to its own outlet which is adequately grounded. The energy current should be 115 V–60 Hz, 127 V– 60 Hz or 220 V– 50/60 Hz (according to the national rating type) with a 15 A fuse for voltages between 115 and 127 V or 10 A to 220 V. (Verify the electric specification of your country.).

This provides the best performance and prevents an overload which could cause a fire from the overheating of the cords. It is recommended that a separate circuit be used for this appliance, as well as a receptacle that cannot be disconnected with a switch.

Do not use an extension cord.

It is your responsibility and obligation to replace two-prong outlets with that of an adequately grounded three-prong outlet.

Do not, under any circumstance, cut or extract the third prong from the plug.

**NOTE:** Before installation, cleaning or replacing light bulbs, you must disconnect the appliance from the power source. When finished, plug the appliance back in and adjust the thermostat to the desired position.

**USE OF EXTENSION CORD**

We do not recommend the use of extension cord. However, if you still choose to utilize an extension cord, it is absolutely necessary that it is listed in the UL (in the United States) or CSA (in Canada), that it supports three-pronged plugs and that the electrical current support with a 15 A fuse for voltages between 115 and 127 V or 10 A to 220 V. (Verify the electric specification of your country.).

The use of an extension cord will increase the amount of space needed behind the refrigerator.

**REPLACING ELECTRICAL CABLE**

If the power cord is damaged, it must be replaced by our service center or qualified LG technician to avoid any risk.

**WARNING**

**DO NOT USE MECHANICAL DEVICES**

Do not use mechanical devices or other means to accelerate the defrosting process, only those recommended by the manufacturer.
“This appliance is intended to be used in household and similar applications such as:

► Staff kitchen areas in shops, offices and other working environments; farm houses and by clients in hotels, motels and other residential type environments.

► Bed and breakfast type environments; catering and similar non-retail applications.”

**WARNING**

**EXCESSIVE WEIGHT HAZARD**

Use the assistance of two or more persons to move or install the refrigerator. Not following these instructions may cause injury to the back and other parts of the body.

**UNPACKING YOUR REFRIGERATOR**

Before installing your refrigerator, remove any tape or temporary stickers. Do not remove any stickers that feature warnings, the model serial number or the technical label of the product located on the back of the refrigerator.

To remove adhesive tape residue, rub it well with your fingers and a little liquid detergent. Clean with warm water and let dry.

Do not use sharp instruments, rubbing alcohol, flammable liquids or abrasive cleaning products to remove the adhesive tape or glue. These products can damage the surface of your refrigerator. For more information, see the section on "Important Safety Instructions".

The shelves come already installed in their factory position. Remove the shelves and replace them according to your spacing needs.

**WARNING**

**WHEN MOVING YOUR REFRIGERATOR**

Your refrigerator is extremely heavy. Make sure you protect the floor when moving your refrigerator for cleaning or servicing. Always pull your refrigerator straight out when moving it. Do not shift from side to side or "walk" the refrigerator when attempting to move it as this can cause damage to the floor.

**WARNING**

**EXPLOSION HAZARD**

Keep all flammable materials and vapors (such as gasoline) away from the refrigerator. Not following these instructions may cause death, explosion or fire

**INSTALLATION**

1. Avoid placing the unit near heat sources, direct sunlight or humidity.
2. To minimize noise and vibration, the refrigerator **MUST** be installed on a solidly constructed floor.
3. Carpeting and soft tile surfaces are not recommended.

4. **NEVER** install the refrigerator on a platform or a weakly supported structure.
5. Install this appliance in an area where the temperature is between 41 °F (5 °C) and 110 °F (43 °C). If the temperature around the appliance is too low or high, cooling ability may be adversely affected.

**NOTE:** For proper air circulation, and best cooling and energy consumption results, maintain a minimum distance of 2 inches (5,08 cm) from adjacent items and surfaces.

**WARNING**

Be careful when you work with the hinge, base grille, stopper, etc. You may be injured. Do not put hands or metal sticks into air vents, base grille or bottom of the refrigerator. You may be injured or receive an electrical shock.

**BASE GRILLE INSTALLATION**

To install or replace base grille:

1. Remove the 2 screws from the bottom front part of refrigerator.
2. Place base grille into position and insert and tighten screws.

To remove the base grille:

1. Open the doors (Refrigerator and Freezer).
2. Once doors are open, remove screws from base grille and remove.
3. Reattach screws to the base of refrigerator.
HANDLE REMOVAL
You may have to remove the door handles to move the refrigerator through a narrow opening. See instructions below.

NOTE: To avoid damaging door surfaces when moving the refrigerator through narrow openings, it is ALWAYS recommended to remove the doors as instructed in the next two pages.

• Loosen the set screws with a 3/32” (2,5 mm) Allen wrench and remove the handle.

NOTE: If the handle mounting fasteners need to be tightened or moved, use a 1/4” (6 mm) Allen wrench.

HANDLE INSTALLATION
Place the handle on the door by adjusting handle footprints to fit mounting fasteners and tighten the set screws with a 3/32” (2,5 mm) Allen wrench.

NOTE: If the handle mounting fasteners need to be tightened or moved, use a 1/4” (6 mm) Allen wrench.

REMOVING AND REPLACING REFRIGERATOR DOORS
Before removing the doors, remove the base grille. See “Base Grille Installation” for reference.

To remove the right (refrigerator) door:
1. Open the door. Remove the top hinge cover screw (1).
2. Use a flat blade screwdriver to pry back the hooks (not shown) of the hinge cover (2) from the top of the refrigerator cabinet. Lift up the cover.
3. Rotate the hinge lever (3) clockwise. Lift the top hinge (4) free of the hinge lever latch (5).

NOTE: Regardless of hinge lever type, removal process is the same.

4. Lift the door from the lower hinge pin.
5. Place the door, inside facing up, on a non scratching surface.

Removing the left (freezer) door with water line connection:
Pull up the water feed tube while pressing the area (Figure 1) as shown in the figure below.

NOTE: If a tube end is deformed or abraded, trim the part away. Disconnecting the tube under the door causes about 0,13 gallons (0,5 liters) water to flow out. Put a large container at end of tube to prevent water from draining onto the floor.

1. Open the door. Remove the top hinge cover screw (1).
2. Use a flat blade screwdriver to pry back the hooks (not shown) of the hinge cover (2) from the top of the refrigerator cabinet (2). Lift up the cover.
3. Disconnect all the wire harnesses (3).
4. Remove the grounding screw (4).
5. Rotate hinge lever (5) counterclockwise. Lift the top hinge (6) free of the hinge lever latch (7).

NOTE: Regardless of hinge lever type, removal process is the same.
Caution
When lifting the hinge free of the latch, be careful that the door does not fall forward.

6. Lift the door from the lower hinge pin being careful to pull the water lines through the lower hinge pin.
7. Place the door, inside facing up, on a non-scratching surface.

Reinstalling the right (refrigerator) door:
1. Place the door onto the lower hinge pin.
2. Fit top hinge (4) over hinge lever latch (5) into place. Rotate lever (3) counterclockwise to secure hinge.

NOTE: Regardless of hinge lever type, reinstallation process is the same.

3. Hook tab on switch side of corner under edge of wire opening in cabinet top. Position cover (2) into place. Insert and tighten cover screw (1).

Reinstalling the left (freezer) door:
1. Feed the water tubes through the lower hinge pin and place the door onto the lower hinge pin.
2. Fit top hinge (6) over hinge lever latch (7) and into place. Rotate lever (5) clockwise to secure hinge.

NOTE: Regardless of hinge lever type, reinstallation process is the same.

3. Install the grounding screw (4) and connect all the wire harnesses (3).
4. Hook tab on door switch side of cover (2) under edge of wire opening in cabinet top. Position cover into place. Insert and tighten cover screw (1).
5. Reconnect the water tubes by inserting the tubes into the connectors.

Door Alignment
Remove the base grille before adjusting the doors. See “Base Grille Installation” for reference. Two methods of door alignment are available based on the amount of adjustment needed and installation requirements.

Type 1
Adjusting tool: Flat blade screwdriver. If the freezer compartment door is lower than the refrigerator compartment door, level them by inserting a flat blade screwdriver into the groove of the left leveling leg and rotating it clockwise.

If the freezer compartment door is higher than the refrigerator compartment door, level them by inserting a flat blade screwdriver into the groove of the right leveling leg and rotating it clockwise.
**Type 2**
Adjusting tools: 5/16” (8 mm) wrench and 3/4” (19 mm) wrench.

Using a 3/4” (19 mm) wrench, turn the keeper nut clockwise to loosen the keeper nut.

Using a 5/16” (8 mm) wrench, turn the adjustment hinge pin clockwise or counterclockwise to level the refrigerator and freezer door.

After setting level door, turn the keeper nut counterclockwise to tighten.

**CAUTION**
Do not over tight the door adjustment screw. The hinge pin can be pulled out. (Adjustable range of height is a maximum of 1/2” (13 mm)).

**AFTER LEVELING THE DOOR HEIGHT**
Confirm all legs are in contact with the floor.

**CONNECTING THE WATER LINE**
**NOTE:** Water line installation is needed when the Automatic Ice maker and/or Water Dispenser features are available on your product.

**BEFORE YOU BEGIN**
This water line installation is not warranted by the refrigerator or ice maker manufacturer or seller. Follow these instructions carefully to minimize the risk of expensive water damage.

Water hammer (water banging in the pipes) in house plumbing can cause damage to refrigerator parts and lead to water leakage or flooding. Call a qualified plumber to correct water hammer before installing the water supply line to the refrigerator.

To prevent burns and product damage, do not hook up the water line to the hot water line.

If you use your refrigerator before connecting the water line, make sure the ice maker power switch is in the OFF (O) position.

Do not install the ice maker tubing in areas where temperatures fall below freezing.

When using any electrical device (such as a power drill) during installation, be sure the device is double insulated or grounded in a manner to prevent the hazard of electric shock, or is battery-powered. All installations MUST be in accordance with local plumbing code requirements.

**NOTE:** Wear eye protection.

- **If a reverse osmosis water filtration system** is connected to your cold water supply, the water line installation is not warranted by the refrigerator or ice maker manufacturer or seller. Follow next instruction carefully to minimize the risk of expensive water damage.

- **If a reverse osmosis water filtration system** is connected to your cold water supply, the water pressure to the reverse osmosis system needs to be a minimum of 40 to 60 PSI (0,28 MPa ~ 0,41 MPa), less than 2~3 sec to fill a cup of 7 oz. capacity. (0,2 L).

If the water pressure from the reverse osmosis system is less than 21 PSI (0,14 MPa), more than 4 sec to fill a cup of 7 oz. capacity (0,2L):
- Check to see whether the sediment filter in the reverse osmosis system is blocked. Replace the filter if necessary.
- Allow the storage tank on the reverse osmosis system to refill after heavy usage.
- If the issue about water pressure from reverse osmosis remains, call a licensed, qualified plumber.

**WHAT YOU WILL NEED**
- Copper Tubing, 1/4” (6,35 mm) outer diameter to connect the refrigerator to the water supply. Be sure both ends of the tubing are cut square.

To determine how much tubing you need, measure the distance from the water valve on the back of the refrigerator to the water supply pipe. Then add 8 feet (2,4 m). Be sure there is sufficient extra tubing (about 8 feet [2,4 m] coiled into 3 turns of about 10” [25 cm] diameter) to allow the refrigerator to move out from the wall after installation.

Be sure that the kit you select allows at least 8 feet (2,4 m) as described above.

- **A cold water supply.** The water pressure MUST be between 20 and 120 PSI (0,14 and 0,83 MPa) on models without a water filter and between 40 and 120 PSI (0,28 and 0,83 MPa) on models with a water filter.

- **Power drill.**
- **1/2” (13 mm) or Adjustable Wrench.**
- **Flat head and Phillips screwdrivers.**
• Two 1/4” (6 mm) outer diameter compression nuts and 2 ferrules (sleeves) to connect the copper tubing to the shutoff valve and the refrigerator water valve.

If your existing copper water line has a flared fitting at the end, you will need an adapter (available at plumbing supply stores) to connect the water line to the refrigerator OR you can cut off the flared fitting with a tube cutter and then use a compression fitting.

• Shutoff valve to connect to the cold water line. The shutoff valve should have a water inlet with a minimum inside diameter of 5/32” (3,96 mm) at the point of connection to the COLD WATER LINE. Saddle-type shutoff valves are included in many water supply kits. Before purchasing, make sure a saddle-type valve complies with your local plumbing codes.

INSTALLATION INSTRUCTIONS

WARNING
Connect to potable water supply only.

1. SHUTOFF THE MAIN WATER SUPPLY
Turn on the nearest faucet to relieve the pressure on the line.

2. CHOOSE THE VALVE LOCATION
Choose a location for the valve that is easily accessible. It is best to connect into the side of a vertical water pipe. When it is necessary to connect into a horizontal water pipe, make the connection to the top or side, rather than at the bottom, to avoid drawing off any sediment from the water pipe.

3. DRILL THE HOLE FOR THE VALVE
Drill a 1/4” (6 mm) hole in the water pipe using a sharp bit. Remove any burrs resulting from drilling the hole in the pipe. Take care not to allow water to drain into the drill. Failure to drill a 1/4” (6 mm) hole may result in reduced ice production or smaller cubes.

NOTE: Licensed plumbers MUST use only cooper tubing NDA tubing #49595 or 49499 or Cross Link Polyethylene (PEX) tubing.

4. FASTEN THE SHUTOFF VALVE
Fasten the shutoff valve to the cold water pipe with the pipe clamp.

5. TIGHTEN THE PIPE CLAMP
Tighten the clamp screws until the sealing washer begins to swell.

NOTE: Do not overtighten or you may crush the tubing.

6. ROUTE THE TUBING
Route the tubing between the cold water line and the refrigerator. Route the tubing through a hole drilled in the wall or floor (behind the refrigerator or adjacent base cabinet) as close to the wall as possible.

NOTE: Be sure there is sufficient extra tubing [about 8 feet (2,4 m) coiled into 3 turns of about 10” (25 cm) diameter] to allow the refrigerator to move out from the wall after installation.

7. CONNECT THE TUBING TO THE VALVE
Place the compression nut and ferrule (sleeve) for copper tubing onto the end of the tubing and connect it to the shutoff valve. Make sure the tubing is fully inserted into the valve. Tighten the compression nut securely.
NOTE: Commonwealth of Massachusetts Plumbing Codes 248CMR shall be adhered to. Saddle valves are illegal and use is not permitted in Massachusetts. Consult with your licensed plumber.

8. FLUSH OUT THE TUBING
Turn the main water supply on and flush out the tubing until the water is clear. Shut the water off at the water valve after about one quart (1 L) of water has been flushed through the tubing.

9. CONNECT THE TUBING TO THE REFRIGERATOR
NOTES:
• Before making the connection to the refrigerator, be sure the refrigerator power cord is not plugged into the wall outlet.
• If your refrigerator does not have a water filter, we recommend installing one. If your water supply has sand or particles that could clog the screen of the refrigerator’s water valve, install the filter in the water line near the refrigerator.
• Do not use old hoses; only use new hoses provided by the manufacturer.
1. Remove the plastic flexible cap from the refrigerator connection.
2. Place the compression nut and ferrule (sleeve) onto the end of the tubing. (See figure 1).
3. Insert the end of the tubing into the connection as far as possible. While holding the tubing, tighten the fitting.

CAUTION
Check to make sure that leaks are not occurring in the water line.

Fasten the tubing into the tubing clamp attached to the back of the refrigerator.

First, loosen the screw fastening the clamp. Next, insert the tubing in the groove. Finally, re-fasten the screw.

10. PLUG IN THE REFRIGERATOR
Arrange the coil of tubing so that it does not vibrate against the back of the refrigerator or against the wall. Push the refrigerator back to the wall.

11. START THE ICE MAKER
Set the ice maker power switch to the ON (I) position. The ice maker will not begin to operate until it reaches its operating temperature of 15 °F (-9 °C) or below. It will then begin operation automatically if the ice maker power switch is in the ON (I) position.
Use this page to become more familiar with the parts and features.

**NOTE:** This guide covers several different models. The refrigerator you have purchased may have some or all of the items listed below. The locations of the features shown below may not match your model.

A. Automatic Ice maker
   The ice is produced in the ice maker and sent to the dispenser.

B. Freezer Shelf

C. Freezer Light (LED)

D. Freezer Door Rack

E. Drawer

F. Base Grille

G. Refrigerator Light (LED)

H. Dairy Corner
   For storage of dairy products such as butter and cheese.

I. Water Filter

J. Refrigerator Shelf

K. Snack Pan
   For storage of meat or fresh food.

L. Refrigerator Door Rack

M. Vegetable Drawer
ENSURING PROPER AIR CIRCULATION

In order to ensure proper temperatures, air MUST flow between the refrigerator and freezer sections.

- Cool air enters the freezer through the vents located at the top of the compartment and exits through the vents located behind the freezer drawers.
- Cool air from the freezer section enters the fresh food section through vents located at the top of the compartment. The air moves down throughout the compartment and exits through the vents located behind the crisper drawers.

- Do not block any of these vents with food packages. If the vents are blocked, airflow will be interrupted and temperature and moisture problems may occur.

IMPORTANT: Because air circulates between both sections, any odors formed in one section will transfer to the other. You MUST thoroughly clean both sections to eliminate odors. To prevent odor transfer and dried out food, wrap or cover foods tightly. (See the “Food Storage Guide” section for details).

NOTE: If you close the refrigerator door, you may see the freezer door open and close again due to pressure from internal air flow.

CONTROL PANEL FEATURES

Press the button for the desire function to review and select other settings.

LED DISPLAY

The LED display shows the temperature settings, dispenser options, and the water filter door alarm and status messages.

ICE TYPE

The ICE TYPE is used to select cube, ice or crushed ice.

NOTE: Hold the glass or other container in place for a couple of seconds after dispensing ice or water to catch the last few cubes or drops.

The dispenser is designed not operate while either refrigerator door is open.

FREEZER

Press the FREEZER button to adjust the temperature in the freezer compartment.

REFRIGERATOR

Press the REFRIGERATOR button to adjust the temperature in the refrigerator compartment.

NOTE: The actual inner temperature varies depending on the food status, since the indicated temperature setting is the target temperature an not the actual temperature within the refrigerator.

Initially set the REFRIGERATOR CONTROL at 37 °F (3°C). Leave it at these settings for 24 hours (one day) to stabilize. Then adjust the compartment temperature as illustrates above.

NOTE: When press simultaneously the FREEZER button and the REFRIGERATOR button for more than 5 seconds, the temperature display will change from Fahrenheit to Celsius or vice versa.

ICE PLUS

Press this button once to activate the increased ice making function. The ICE PLUS icon on the display panel will illuminate when activated. The Ice Plus function runs the freezer compartment at the coldest settings for a 24 hours period to increase ice making. Press the button again to cancel the Ice Plus function.

PRIOR TO USE

1. Clean your refrigerator thoroughly and wipe off dust accumulated during shipping.
2. Install accessories such as ice cube bin, drawers, shelves, etc., in their proper places. They are packed together to prevent possible damage during shipment.
3. Let your refrigerator run for at least 2 or 3 hours before putting food in it. Check the flow of cold air in the freezer compartment to ensure proper cooling. Your refrigerator is now ready for use.
USING YOUR REFRIGERATOR

**Light/Filter**
The Light/Filter button controls the lamp in the dispenser, resets the water filter replacement indicator when the filter has been replaced.

The water filter needs replacement once every six months. Filter month indicator becomes "O" to let you know when replace filter.

Press and hold the Light/Filter button for more than 3 seconds to reset the filter month indicator to six after the water filter has been replaced.

**Alarm/Lock**
Press this button to control the door-open alarm. Press and hold the Alarm/Lock button for 3 seconds to lock the dispenser and all the other control panel functions.

Press and hold again for 3 seconds to unlock. The ALARM/LOCK button also controls the door alarm that sounds three times in 30 seconds intervals when a compartment door is left open for more than 60 seconds. The alarm stop sounding when the door is closed. Press the ALARM/LOCK button once to activate or deactivate the door alarm function.

**Display Off Mode**
To activated Display Off Mode press and hold ICE PLUS and Freezer key over 5 seconds until lights will turn on and after 20 seconds of inactivity the lights will turn off automatically.

To exit Display Off Mode press and hold ICE PLUS and Freezer key over 5 seconds until lights will tilt. Display Off Mode does not affect the temperature control settings of the unit.

---

**1 Ice Type Indicator**
Shows the type of ice, crushed or cube, or water that the dispenser will dispense.

**2 Freezer Temperature**
Shows the temperature in the freezer, Celsius or Fahrenheit.

**3 Refrigerator Temperature**
Shows the temperature in the refrigerator, Celsius or Fahrenheit.

**4 Ice Plus**
When this button is on the screen will show this has been activated.

**5 Dispenser Light**
When this button is in function on the light will show this has been activated. When the dispenser light is on the display will indicate this feature.

**6 Door Alarm Indicator**
This indicator shows that the door-open warning alarm is activated.

**7 Water Filter Status**
This light shows the filter’s status. See the filter’s configurations.

**8 Lock Status**
This light shows the actual status of the control panel, in which the lock function is on.

**Diagnosis Function (Failure Detection)**
Diagnosis function automatically detects failure during the normal use of refrigerator.

If your refrigerator fails, do not turn off the power. Instead, contact a local Authorized service center or call our support line for assistance. Turning off the appliance will make it more difficult for the service technician to determine the problem.

**Adjusting Control Settings**
Give the refrigerator time to cool down completely before making final adjustments. It is best to wait 24 hours before doing this. The initial settings mentioned in "Control Panel Features" section should be correct for normal household refrigerator use.

The refrigerator control functions as the thermostat for the entire appliance (refrigerator and freezer sections). The colder the setting, compressor will the longer the run to keep the temperature colder. The freezer control adjusts the cold air flow from the freezer to the refrigerator. Setting the freezer control to a lower temperature keeps more cold air in the freezer compartment to make it colder.

If you need to adjust temperatures in the refrigerator or freezer, start by adjusting the refrigerator and allow 24 hours for the temperature to stabilize. If it is too warm or too cold, then adjust the freezer control. Use the settings listed in the chart below as a guide. Always remember to wait at least 24 hours between adjustments.

<table>
<thead>
<tr>
<th>CONDITION/REASON:</th>
<th>RECOMMENDED ADJUSTMENT:</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Refrigerator</strong> section is too cold</td>

<tr>
<td><strong>Freezer</strong> section is too cold</td>
<td>Adjust the Freezer setting to the next lowest number and wait 24 hours, then check.</td>
</tr>
<tr>
<td>Controls not set correctly for your conditions</td>
<td></td>
</tr>
</tbody>
</table>
CONDITION/REASON: RECOMMENDED ADJUSTMENT:

REFRIGERATOR section is too warm
  • Opening the door often
  • Adding a large amount of food
  • Room temperature is very warm
Adjust the REFRIGERATOR setting to the next highest number and wait 24 hours, then check.

FREEZER section is too warm/ice is made too slowly
  • Opening the door often
  • Adding a large amount of food
  • Room temperature is very low (not cycling often enough)
  • Using ice frequently
  • Air vents blocked by objects
Adjust the FREEZER setting to the next highest number and wait 24 hours, then check.

FOOD STORAGE GUIDE
Wrap or store food in the refrigerator in airtight and moisture-proof material unless otherwise noted. This prevents food odor and taste transfer throughout the refrigerator. For dated products, check date code to ensure freshness.

<table>

</table>

ICE MAKER OPERATION

A newly-installed refrigerator may take 12 to 24 hours to begin making ice.

The ice maker produces 5 cubes per cycle (in between 60 and 80 cubes in a 24 hour period), depending on the temperature of the freezer, the times in which the door opens, and other using conditions (amount of food in the freezer, etc).

If the refrigerator is used before the water connection is made to the ice maker, set the power switch to OFF (O). Throw away the first few batches of ice to allow the water line to clear.

WARNING
PERSONAL INJURY HAZARD
Avoid contact with the moving parts of the ejector mechanism, or with the heating element that releases the cubes. DO NOT place fingers or hands on the automatic ice making mechanism while the refrigerator is plugged in.

Be sure nothing interferes with the sweep of the feeler arm. When the bin fills to the level of the feeler arm, the ice maker will stop producing ice.

It is normal for several cubes to be stuck together. If ice is not used frequently, old ice cubes will become cloudy, taste stale and shrink.

ICE MAKER OPERATION

A newly-installed refrigerator may take 12 to 24 hours to begin making ice.

The ice maker produces 5 cubes per cycle (in between 60 and 80 cubes in a 24 hour period), depending on the temperature of the freezer, the times in which the door opens, and other using conditions (amount of food in the freezer, etc).

If the refrigerator is used before the water connection is made to the ice maker, set the power switch to OFF (O). Throw away the first few batches of ice to allow the water line to clear.

The ice maker produces 5 cubes per cycle (in between 60 and 80 cubes in a 24 hour period), depending on the temperature of the freezer, the times in which the door opens, and other using conditions (amount of food in the freezer, etc).

If the refrigerator is used before the water connection is made to the ice maker, set the power switch to OFF (O). Throw away the first few batches of ice to allow the water line to clear.
STORING FROZEN FOOD

NOTE: For further information about preparing food for freezing or food storage times, check a freezer guide or a reliable cookbook.

Packaging
Successful freezing depends on correct packaging. When you close and seal the package, it must not allow air or moisture in or out. If it does, you could have food odor and taste transfer throughout the refrigerator and also dry out frozen food.

Packaging Recommendations:
- Rigid plastic containers with "tight-fitting lids".
- Straight-sided canning/freezing jars.
- Heavy-duty aluminum foil.
- Plastic-coated paper.
- Non-permeable plastic wraps.
- Specified freezer-grade self-sealing plastic bags.

Follow package or container instructions for proper freezing methods.

Do not use:
- Bread wrappers
- Containers without tight lids
- Wax paper or wax-coated freezer wrap
- Thin, semi-permeable wrap

CAUTION
Do not keep beverage cans or plastic food containers in the freezer compartment. They may burst if they freeze.

Freezing
Your freezer will not quick-freeze any large quantity of food. Do not put more unfrozen food into the freezer than will freeze within 24 hours [no more than 2 to 3 lbs of food per cubic foot (0,9 to 1,35 kg per cubic meter) of freezer space]. Leave enough space in the freezer for air to circulate around packages. Be careful to leave enough room at the front so the door can close tightly.

Food storage times will vary according to the quality and type of food, the type of packaging or wrap used (airtight and moisture-proof) and the storage temperature. Ice crystals inside a sealed package are normal. This simply means that moisture in the food and air inside the package have condensed, creating ice crystals.

NOTE: Allow hot foods to cool at room temperature for 30 minutes, then package and freeze. Cooling hot foods before freezing saves energy.

WATER AND ICE DISPENSER
Your refrigerator has a mechanism that dispatch cool water and ice cubes without open the door.
- Tray can be easily removed by pressing and pulling it.
- Tilt up the front of tray slightly and snap the ribs into the holes to reinstall the tray.

WARNING
Do not put your hands into the water & ice dispenser opening. Doing so may cause an injury to your hand.

CAUTION
When opening the container with the small opening, use it near the opening of the water or ice dispenser as close as possible.

Water Switch
Press the push water switch or activate water button with a pluss or the water container and chilled water will be dispensed. When the water switch or water button is pressed, the light will be illuminated.

ICE STORAGE BIN
The ice bin stores the ice cubes made by the ice maker. If you need to remove the ice storage bin, do so as follows:

NOTE: Use both hands to remove the ice bin to avoid dropping it.
- Lift the ice storage bin slightly ① and pull it out ② as shown in the figure.
DOOR RACK AND SUPPORT
Your refrigerator and freezer features racks which can easily be arranged for packaged products.
• Lift the door rack holding both sides (1) and pull it out in (2) direction.

SNACK PAN
• To remove the snack pan cover, pull out the snack pan compartment a bit to the front (1), then lift the front part of the snack pan compartment later raises a little the snack pan compartment until it leaves the top of the shelf as shown in (2), and take it out.

CRISPER AND CRISPER COVER
The crisper allows for better conservation of fruits and vegetables.
• To remove the crisper compartment cover, pull out the crisper compartment a bit to the front (1), lift the front part of the cover as shown in (2), and take it out (3).
• To remove the crisper compartment, pull the crisper compartment to the front (1) until it stops. Then slightly lift the crisper compartment (2) while pulling it out (3).

CAUTION
When removing the crisper compartment you will see the water tank. Do not remove it, or water leakage may result. The water tank is not a removable part.

HUMIDITY CONTROLS
You can control the amount of humidity in the moisture sealed crispers. Adjust the control to any setting between “HIGH” and “LOW”.
“HIGH”: Keeps moist air in the crisper for best storage of fresh, leafy vegetables.
“LOW”: Keeps moist air out of the crisper for best storage of fruits or vegetables with skins.

REFRIGERATOR SHELVES
CAUTION
Make sure to keep shelf horizontal while removing; otherwise it may drop.

The refrigerator compartment shelf is adjustable so that you can place it at a height according to space requirement of foods.

Sliding out Shelf:
Pull the shelf towards you (1), then lift both front and rear (2) while taking it out (3).
CAUTION
Be careful when pulling out the shelf. If you apply too much force, it may hit the refrigerator door and damage it or you could hurt yourself.

Fixed Shelf:
• Lightly lift up the front part of the shelf ① to pull it towards you ②, then take it out while lifting the rear part of shelf ③.

FREEZER SHELF
To assemble or disassemble the freezer shelf, follow the next steps:
• Lift the left part of the shelf a bit. Lift it to the direction ①, push the right part to the direction ② and take it out.
WATER FILTER

The water control panel shows in months the time to be left to change the filter; from the first turn on of the refrigerator or 6 months or the water dispenser has been used.

If you have changed the filter after 6 months of use or you wish to reset the filter indicator screen, press the FILTER button more than 3 seconds until you hear a beep, this will let you know that the screen has been reseted.

**NOTE:** The average life of the filter is 6 months.

It's highly recommended to change the filter when the indicator light is on or the water dispenser or the ice dispenser changes drastically. After changing the water filter cartridge, reset the water filter status display and indicator light by pressing and holding the BUTTON for 3 seconds.

**How to change the old cartridge.**

1. Turn the shutoff valve off (house valve).

2. Dispense water from the system to empty the tubing (approximately for 50 seconds).

3. Remove the old cartridge. Rotate the knob of the cartridge counter clockwise.

   When the cartridge is removed, it will click out of place. Pull out the cartridge.

   **NOTE:** There will be water in the cartridge. Some spilling may occur through the hole at rear bottom side of cover. You may use a cup or something like that to prevent split water drop into food.

4. Replace with a new cartridge. Take the new cartridge out of its packaging and remove protective cover from the o-rings. With cartridge knob in the vertical position, push the new filter cartridge into the cover until it stops.

   If you can’t turn the filter from side to side, it is not fully inserted. Push it in firmly and twist it into place. You will hear it click into place. Using its handle, twist the cartridge clockwise about 1/4 turn. You will hear when it clicks into place.

5. Turn the shut off valve on (house valve).

6. Flush water out from the system until air gets eliminated and water start to dispense (approximately for 60 seconds). Flush 2.5 gallons (9.5 liters) of water through filter.

**NOTE:** To purchase replacement water filter cartridges, visit your local appliance dealer or part distributor.
Performance Data Sheet
Models Number 5231JA2006E

Use with replacement cartridge 5231JA2006E

This system has been tested according to NSF/ANSI Standards 42 for the reduction of the substances listed below. The concentration of the indicated substances in water entering the system was reduced to a concentration less than or equal to the permissible limit for water leaving the system as specified in NSF/ANSI 42.

**WARNING**

To reduce the risk associated with ingestion of contaminants due to use with water that is micro biologically unsafe or of unknown quality. Do not use with water that is micro biologically unsafe or of unknown quality without adequate disinfection before or after the system.

Systems must be installed and operated in accordance with manufacturer’s recommended procedures and guidelines.

**CAUTION**

To reduce the risk of property damage due to water leakage:
- Read and follow Use instructions before installation and use of this system.
- Install on COLD water lines only. Comply with all state and local plumbing codes.
- Company with all state and local plumbing codes.
- Never install or operate where inlet water pressure may exceed 125 psi (862 kPa).
- Protect filter from freezing. Remove filter in temperatures below 34 °F (1 °C).
- Replace cartridge at specified service interval.
- Cartridge MUST be replaced at least every 6 months.
- After replacing the water filter cartridge, dispense 2,5 gallons (9,46 liters) of water to purge the system, depressing and releasing the dispenser pad in cycles of 30 seconds ON and 60 seconds OFF. Discard the purged water.

To purchase or replace water filters call your Service Center. Refer to the Warranty Card to obtain the telephone number of the Service Center near you and ask for part no. 5231JA2006E.

The water treatment device(s) listed on this certificate have met the testing requirements pursuant to Section 116830 of the Health and Safety Code for the following health related contaminants:

### Microbiological Contaminants and Turbidity
- Cysts

### Organic Contaminants
- 2,4-D Reduction
- Atrazine
- Benzene
- Carbofuran
- Lindane
- p-Dichlorobenzene
- Toxaphene

### Inorganic/Radiological Contaminants
- Asbestos
- Lead
- Mercury

| Rated Service Capacity: 200 gal | Rated Service Flow: 0.5 gpm |

Conditions of Certification:
WARNING

EXPLOSION HAZARD

Use non-flammable cleaner. Failure to do so can result in death, explosion, or fire.

Both the refrigerator and freezer sections defrost automatically. However, clean both sections about once a month to prevent odors. Wipe up spills immediately.

GENERAL CLEANING TIPS

- Unplug refrigerator or disconnect power.
- Remove all removable parts, such as shelves, crispers, etc. Refer to sections in "Using Your Refrigerator" for removal instructions.
- Use a clean sponge or soft cloth and a mild detergent in warm water. Do not use abrasive or harsh cleaners.
- Hand wash, rinse and dry all surfaces thoroughly.
- Plug in refrigerator or reconnect power.

OUTSIDE

Waxing external painted metal surfaces helps provide rust protection. Do not use plastic parts. Wax painted metal surfaces at least twice a year using appliance wax (or auto paste wax). Apply wax with a clean, soft cloth.

Do not use wax on stainless steel exteriors. Use a product specially designed for polishing stainless steel appliances, or clean with a soft cloth or clean sponge and a mild detergent dissolved in warm water. Dry thoroughly with a soft cloth.

NOTE: Avoid door surface contact with chemical products that contain Phosphate or Chlorine, such as degraders, detergents (containing TSP) and bleaches.

INSIDE WALLS

NOTE: Allow freezer to warm up so cloth will not stick.

To help remove odors, you can wash the inside of the refrigerator with a mixture of baking soda and warm water. Mix 2 tablespoons baking soda to 1 quart of water (26 g soda to 1 liter water.) Be sure the baking soda is completely dissolved so it does not scratch the surfaces of the refrigerator.

DOOR LINERS AND GASKETS

Do not use cleaning waxes, concentrated detergent, bleaches, or cleaners containing petroleum on plastic refrigerator parts. Use a clean sponge or soft cloth and a mild detergent in warm water. Wash, rinse and dry all surfaces thoroughly.

PLASTIC PARTS (covers and panels)

Do not use window sprays, abrasive cleaners or flammable fluids. These can scratch or damage the material. Use a clean sponge or soft cloth and a mild detergent in warm water. Wash, rinse and dry all surfaces thoroughly.

BACK COVER

WARNING

ELECTRICAL SHOCK HAZARD

Before you begin, either unplug the refrigerator or turn off power at the circuit breaker or fuse box. Failure to do so could result in death or serious injury.

NOTE: Back Cover should only be removed by a qualified technician.

Clean the vents on the back cover. Use a vacuum cleaner with the brush attachment, at least twice a year to keep your refrigerator working efficiently.

LIGHT (LED) REPLACEMENT

NOTE: Do not remove the LED, it is only to be removed by a qualified technician.

POWER INTERRUPTIONS

1. If the power will be out for 24 hours or less, keep all refrigerator doors closed to help foods stay cold and frozen.
2. If the power will be out for more than 24 hours:
   a) Remove all frozen food and store it in a frozen food locker.
   OR
   b) Place 2 lbs. (1 kg) of dry ice in the freezer for every cubic foot (28 L) of freezer space. This will keep the food frozen for two to four days. While handling dry ice, wear gloves to protect your hands from frostbite.
   OR
   c) If neither a food locker nor dry ice is available, consume or dispose of food at once.

WARNING

SUCCOFICATION HAZARD

When using dry ice, provide adequate ventilation. Dry ice is frozen carbon dioxide (CO₂). When it vaporizes, it can displace oxygen, causing dizziness, light-headedness, unconsciousness and death by suffocation. Open a window and do not breathe the vapors.

OR

If neither a food locker nor dry ice is available, consume or dispose of food at once.
REMEMBER: In a power failure, a full freezer stays cold longer than a partially filled one. If you see that food contains ice crystals, it may be affected. If the condition of the food is poor, or if you feel it is unsafe, dispose of it.

---

**WARNING**

DO NOT refreeze frozen foods which have thawed completely. The United States Department of Agriculture in Home and Garden Bulletin No. 69 says: ...You may safely refreeze frozen foods that have thawed if they still contain ice crystals or if they are still cold below 40 °F (4 °C). ...Thawed ground meats, poultry or fish that have any off-odor or off-color should not be frozen and should not be eaten. Thawed ice cream should be discarded.

If the odor or color of any food is poor or questionable, dispose of it. The food may be dangerous to eat. Even partial thawing and refreezing reduces the eating quality of foods, particularly fruits, vegetables and prepared foods.

The eating quality of red meats is affected less than that of many other foods. Use refrozen foods as soon as possible to save as much of their quality as you can.

---

**WHEN YOU GO ON VACATION**

If you choose to leave the refrigerator ON while you are away, follow these steps to prepare your refrigerator before you leave.

1. Use up any perishables and freeze other items.
2. Empty the ice bin.
3. Turn OFF the Ice maker. **NOTE:** If the ambient temperature will drop below freezing, have a qualified service technician drain the water supply system (on some models) to prevent serious property damage due to possible flooding from ruptured water lines or connections.

If you choose to turn the refrigerator OFF before you leave, follow these steps:

1. Remove all food from the refrigerator and empty ice bin.
2. Unplug refrigerator.
3. Clean refrigerator, wipe and dry well.
4. Tape rubber or wood blocks to the tops of both doors to prop them open far enough for air to get in. This stops odor and mold from building up.

---

**WHEN YOU MOVE**

When you are moving your refrigerator to a new home, follow these steps to prepare it for the move.

1. Remove all food from the refrigerator and pack all frozen food in dry ice.
2. Unplug refrigerator.
3. Clean refrigerator, wipe, and dry thoroughly.
4. Take out all removable parts, wrap them well and tape together so they don’t shift and rattle during the move. Refer to sections in “Using your Refrigerator” for removal instructions.
5. Depending on the model, raise the front of the refrigerator so it rolls more easily or screw in the leveling legs all the way so they don’t scrape the floor. See the “Door Alignment” section.
6. Tape the doors shut and tape the power cord to the refrigerator cabinet.

When you get to your new home, put everything back and refer to the “Refrigerator Installation” section for setup instructions.

---

**WHEN YOU SHOULD SET THE ICE MAKER POWER SWITCH TO OFF (O)**

- When the water supply will be shut off for several hours.
- When the ice storage bin is removed for more than a minute or two.
- When the refrigerator will not be used for several days.

**NORMAL SOUNDS YOU MAY HEAR**

- The ice maker water valve will buzz as the ice maker fills with water. If the power switch is in the ON position, it will buzz even if it has not yet been hooked up to water. To stop the buzzing, move the power switch to OFF position.

**NOTE:** Keep the power switch in the ON position before the water line is connected can damage the ice maker.

- You will hear the sound of cubes dropping into the bin and water running in the pipes as the ice maker refills.
UNDERSTANDING SOUNDS YOU MAY HEAR

Your new refrigerator may make sounds that your old one did not make. Because the sounds are new to you, you might be concerned about them. Most of the new sounds are normal. Hard surfaces, like the floor, walls and cabinets, can make the sounds seem louder than they actually are. The following list describes the kinds of sounds and what may be making them.

- The defrost timer will click when the automatic defrost cycle begins and ends. The thermostat control (or refrigerator control, depending on the model) will also click when cycling on and off.
- Ratting noises may come from the flow of refrigerant, the water line, or items stored on top of the refrigerator.
- Your refrigerator is designed to run more efficiently to keep your food items at the desired temperature. The high efficiency compressor may cause your new refrigerator to run longer than your old one, and you may hear a pulsating or high-pitched sound.
- You may hear the evaporator fan motor circulating the air through the refrigerator and freezer compartments.
- As each cycle ends, you may hear a gurgling sound due to the refrigerant flowing in your refrigerator.
- Contraction and expansion of the inside walls may cause a popping noise.
- Water dripping on the defrost heater during a defrost cycle may cause a sizzling sound.
- You may hear air being forced over the condenser by the condenser fan.
- You may hear water running into the drain pan during the defrost cycle.

TROUBLESHOOTING GUIDE

<thead>
<tr>
<th>Problem</th>
<th>Possible Causes</th>
<th>Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>REFRIGERATOR DOES NOT OPERATE</td>
<td>• The power supply cord is unplugged.</td>
<td>• Firmly plug the cord into a live outlet with proper voltage.</td>
</tr>
<tr>
<td></td>
<td>• A household fuse has blown or circuit breaker tripped.</td>
<td>• Replace the fuse or reset the circuit breaker.</td>
</tr>
<tr>
<td></td>
<td>• The refrigerator control is set to the OFF position.</td>
<td>• Refer to the “Control Panel Features” section.</td>
</tr>
<tr>
<td></td>
<td>• Refrigerator is in the defrost cycle.</td>
<td>• Wait about 30 minutes for defrost cycle to end.</td>
</tr>
<tr>
<td>VIBRATION OR RATTLING NOISE</td>
<td>• The refrigerator is not resting solidly on the floor.</td>
<td></td>
</tr>
<tr>
<td>LED (LAMP) DO NOT WORK</td>
<td>• The power supply cord is unplugged.</td>
<td>• Floor is weak or uneven or leveling legs need adjusting. See “Door Alignment” Section.</td>
</tr>
<tr>
<td></td>
<td>• LED Light has burned out.</td>
<td>• See the “Light (LED) Replacement” section.</td>
</tr>
<tr>
<td>COMPRESSOR MOTOR SEEMS TO RUN TOO MUCH</td>
<td>• The refrigerator that was replaced was an older model.</td>
<td>• Modern refrigerators with more storage space require more operating time.</td>
</tr>
<tr>
<td></td>
<td>• The room temperature is hotter than normal.</td>
<td>• The motor will run longer under warm conditions. At normal room temperatures, expect your motor to run about 40% to 80% of the time. Under warmer conditions, expect it to run even more often.</td>
</tr>
<tr>
<td></td>
<td>• The refrigerator was recently plugged in and the refrigerator control was set correctly.</td>
<td>• The refrigerator will take up to 24 hours to cool completely.</td>
</tr>
<tr>
<td></td>
<td>• The door is opened often or a large amount has just been added.</td>
<td>• Adding food and opening the door warms the refrigerator. It is normal for the refrigerator to run longer in order to conserve energy, try to get everything you need out of the refrigerator at once, keep food organized so it is easy to find and close the door as soon as the food is removed. See the “Food Storage Guide” section.</td>
</tr>
<tr>
<td></td>
<td>• The refrigerator control was not set correctly for the surrounding conditions.</td>
<td>• See the “Adjusting Control Settings” Section.</td>
</tr>

## TROUBLESHOOTING GUIDE

<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Causes</th>
<th>Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>COMPRESSOR MOTOR SEEMS TO RUN TOO MUCH</strong></td>
<td>• The doors are not closed completely. &lt;br&gt;• The condenser coils are dirty.</td>
<td>• Push the doors firmly shut. If they will not shut all the way, see Doors will not close completely below.  &lt;br&gt;• This prevents air transfer and makes the motor work harder. Clean the condenser coils. Refer to the “Care and Cleaning” section.</td>
</tr>
<tr>
<td><strong>DOORS WILL NOT CLOSE COMPLETELY</strong></td>
<td>• The refrigerator is not level. &lt;br&gt;• Food packages are blocking the door open. &lt;br&gt;• The ice bin, crisper cover, pans, shelves, door bins or baskets are out of position. &lt;br&gt;• The gaskets are sticking. &lt;br&gt;• The refrigerator wobbles or seems unstable. &lt;br&gt;• The doors were removed during product installation and not properly replaced.</td>
<td>• See the “Refrigerator Installation” and “Door Alignment” sections to level refrigerator.  &lt;br&gt;• Rearrange food containers to clear door and door shelves.  &lt;br&gt;• Push bins all the way in and put crisper cover, pans, shelves and baskets into their correct positions. See the “Using your Refrigerator” Section.  &lt;br&gt;• Clean gaskets and the surface that they touch. Rub a thin coat of paraffin wax on the gaskets after cleaning.  &lt;br&gt;• Level the refrigerator. Refer to the “Door Alignment” section.  &lt;br&gt;• Remove and replace the doors according to the “Removing and Replacing Refrigerator Doors” section or call qualified service technician.</td>
</tr>
<tr>
<td><strong>THE DOORS ARE DIFFICULT TO OPEN</strong></td>
<td>• The gaskets are dirty or sticky. &lt;br&gt;• The door is reopened within a short time after having been opened.</td>
<td>• Clean gaskets and the surfaces that they touch. Rub a thin coat of appliance polish or kitchen wax on the gaskets after cleaning.  &lt;br&gt;• When you open the door, warmer air enters the refrigerator. As the warm air cools, it can create a vacuum. If the door is hard to open, wait 5 minutes to allow the air pressure to equalize, then see if it opens more easily.</td>
</tr>
<tr>
<td><strong>TEMPERATURE IS TOO WARM OR THERE IS INTERIOR MOISTURE BUILDUP</strong></td>
<td>• The doors are opened often. &lt;br&gt;• The control is not set correctly for the surrounding conditions. &lt;br&gt;• A large amount of food has just been added to the refrigerator or freezer. &lt;br&gt;• The food is not packaged correctly. &lt;br&gt;• The doors are not closing completely. &lt;br&gt;• The weather is humid. &lt;br&gt;• A self-defrost cycle was completed. &lt;br&gt;• The air vents are blocked. Cold air circulates from the freezer to the fresh food section and back again through air vents in the wall dividing the two sections.</td>
<td>• When the door is opened, warm humid air is allowed into the refrigerator. The more the door is opened, the faster the humidity builds up, and the more warm air the refrigerator must cool. In order to keep the refrigerator cool, try to get everything you need out of the refrigerator at once, keep food organized so it is easy to find and close the door as soon as the food is removed.  &lt;br&gt;• Refer to the “Control Panel Features”. Wait 24 hours for temperatures to stabilize or even out. If the temperature is too cold or too warm, adjust the setting one level at a time.  &lt;br&gt;• Adding food warms the refrigerator. It can take a few hours for the refrigerator to return to normal temperature.  &lt;br&gt;• Wrap food tightly and wipe off damp containers prior to storing in the refrigerator to avoid moisture accumulation. If necessary, repackage food according to the guidelines in the “Food Storage Guide” section.  &lt;br&gt;• See “Doors will not close completely”.  &lt;br&gt;• In humid weather, air carries moisture into refrigerator when doors are opened.  &lt;br&gt;• It is normal for droplets to form on the back wall after the refrigerator self-defrosts.  &lt;br&gt;• Locate air vents by using your hand to sense airflow and move all packages that block vents and restrict airflow. Refer to “Ensuring Proper Air Circulation” section for the location of air vents.</td>
</tr>
<tr>
<td>Problem</td>
<td>Possible Causes</td>
<td>Solutions</td>
</tr>
<tr>
<td>---------</td>
<td>----------------</td>
<td>-----------</td>
</tr>
<tr>
<td>CUBES PRODUCED BY ICE MAKER ARE TOO SMALL</td>
<td>• Water shutoff valve connecting refrigerator to water line may be clogged.</td>
<td>• Call a plumber to clear the valve.</td>
</tr>
</tbody>
</table>
| ICE HAS BAD TASTE OR ODOR | • The ice maker was recently installed.  
• The ice has been stored for too long.  
• The food has not been wrapped tightly in either compartment.  
• The water supply contains minerals such as sulfur.  
• The interior of refrigerator needs cleaning.  
• Ice storage bin needs cleaning. | • Discard first few batches of ice to avoid discolored or off-flavored ice.  
• Throw away old ice and make new supply.  
• Rewrap foods since odors may migrate to the ice if food is not wrapped properly.  
• A new filter may need to be installed to eliminate taste and odor problems.  
• See “Care and Cleaning” section.  
• Empty and wash bin. Discard old cubes. |
| THERE IS WATER IN THE DEFROST DRAIN PAN | • The refrigerator is defrosting.  
• It is more humid than normal. | • The water will evaporate. It is normal for water to drip into the defrost pan.  
• Expect that the water in the defrost pan will take longer to evaporate. This is normal when it is hot or humid. |
| THE REFRIGERATOR SEEMS TO MAKE TOO MUCH NOISE | • The sounds may be normal for your refrigerator. | • Refer to the “Understanding sounds you may hear” section. |
| FROST OR ICE CRYSTALS ON FROZEN FOOD | • The door is not closing properly.  
• The door is opened often. | • See “Doors will not close completely” above.  
• When the door is opened, warm, humid air is allowed in the freezer resulting in frost. |
| THE ICE MAKER IS NOT PRODUCING ICE OR ICE CUBES ARE FREEZING TOO SLOWLY | • The freezer temperature is cold enough to produce ice.  
• Door left open. | • Wait 24 hours after hook-up for ice production.  
See the “Control Panel Features” section.  
• Check to see if something is holding the door open. |
| AUTOMATIC ICE MAKER DOES NOT WORK | • Ice maker power switch on OFF (O) position.  
• Water supply turned off or not connected.  
• Freezer compartment too warm.  
• Piled up the cubes in the storage bin cause the ice maker to shut off. | • Move the switch to the ON (I) position.  
• See the “Connecting the Water Line” section.  
• Wait 24 hours for the freezer to reach its ideal temperature.  
• Level cubes by hand or shake the bin occasionally. |
| NOT DISPENSING ICE | • All the doors are not closed completely.  
• The dispenser display is locked.  
• Ice is not selected on the dispenser.  
• The ice dispenser is not used often.  
• Ice bin is not installed correctly.  
• New installation.  
• Ice cubes are stuck in the delivery chute. | • Ice will not dispense if any of the refrigerator doors are left open.  
• Press and hold the Lock button for 3 seconds to unlock the control panel and dispenser.  
• The dispenser can be set for ice or water. Make certain that the control panel is set for the proper operation. Press the dispenser button on the control panel to cycle through the ice and water options.  
• Check the ice bin for ice cubes clumping/ sticking together. If they are, break up the ice cubes allow for proper operation.  
• Be sure to install the ice bin firmly into position.  
• Wait 24 hours after ice maker installation for ice production to begin. Wait 72 hours for full ice production.  
• Use a plastic utensil to clear the delivery chute. |
<table>
<thead>
<tr>
<th>Problem</th>
<th>Possible Causes</th>
<th>Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOT DISPENSING ICE</td>
<td>• The ice dispenser is stalling while dispensing &quot;crushed&quot; ice.</td>
<td>• Change the ice button from &quot;crushed&quot; to &quot;cubed&quot;. If cubed ice dispenses correctly, depress the button for &quot;crushed&quot; ice and begin dispensing again.</td>
</tr>
<tr>
<td></td>
<td>• Ice maker power switch in the <strong>OFF (0)</strong> position.</td>
<td>• Move the switch to the <strong>ON (I)</strong> position.</td>
</tr>
<tr>
<td></td>
<td>• Water supply turned off or not connected.</td>
<td>• See the “Connecting the Water Line” section.</td>
</tr>
<tr>
<td>NOT DISPENSING WATER</td>
<td>• The dispenser display is locked.</td>
<td>• Press and hold the Lock button for 3 seconds to unlock the control panel and dispenser.</td>
</tr>
<tr>
<td></td>
<td>• New installation.</td>
<td>• Flush and fill the water system.</td>
</tr>
<tr>
<td></td>
<td>• Refrigerator or freezer doors are not closed properly.</td>
<td>• Water will not dispense if any of the refrigerator doors are left open.</td>
</tr>
<tr>
<td></td>
<td>• Water supply turned off or not connected.</td>
<td>• See the “Connecting the Water Line” section.</td>
</tr>
<tr>
<td></td>
<td>• The water pressure is less than 40 PSI (0,27 MPa).</td>
<td>• The water pressure to the home affects the flow from the dispenser.</td>
</tr>
<tr>
<td></td>
<td>• Home filter or reverse osmosis system is used.</td>
<td>• This can decrease water pressure. It is recommended not to connect the supply line to a reverse osmosis system for optimal operation.</td>
</tr>
<tr>
<td></td>
<td>• The dispenser is not set for water dispensing.</td>
<td>• The dispenser can be set for ice or water. Make certain that the control panel is set for the proper operation. Press the dispenser button on the control panel to cycle through the ice and water options.</td>
